

# *Flying S Herefords*

*6<sup>th</sup> Annual*

## **LINE ONE PRODUCTION SALE**

**Tuesday, March 17, 2020**

*12 noon at the Ranch near Paluxy, Texas*

## Welcome to Flying S Herefords!

We would like to invite you to join us for our Sixth Annual Production Sale here at the ranch. Flying S Herefords Ranch is located in Paluxy, Texas, southwest of Fort Worth. Our mission is to produce elite Line One Horned Herefords that will excel in any environment for any type of operation. Over the past years, we have invested in the top bloodlines of the finest Line One Herefords in America from Holden Herefords and Cooper Herefords. Our focus is on every aspect of the Hereford breed. We believe in a long-lasting performance Line One breeding program to increase the predictability of our cattle for our customers, whether commercial or seedstock.

In order to succeed in Line One breeding, you must continue to introduce cattle with superior genetics. Flying S Herefords focuses heavily on the maternal abilities in our breeding program. We have a strict culling program that enables us to produce and retain only the genetically superior animals. Cows are culled based on fertility, performance, soundness, disposition and udder quality. We are active members in the Texas Hereford Association along with the American Hereford Association, and we are involved with the TPR program of the American Hereford Association and are active members in the Whole Herd Reporting Program.

It is a great pleasure to be able to offer such an exceptional set of bulls and females. This group of bulls represents the best of our fall 2018 and spring 2019 calf crops. They are all sired by top trait leading, high quality Line One bulls. They are a balanced trait set of bulls that combine phenotype, uniformity, pigment, maternal strength, thickness, performance, fleshing ability and carcass with eye appeal. All bulls and heifers sell with performance and ultrasound data and have been DNA parentage verified, GE-EPD tested and have been tested IE Free, HY Free and Dilutor Free. All bulls have been trich and semen tested.

All sale cattle and our cow herd will be on display March 16th and 17th up to sale time. On Monday, the 16th, we will have drinks and snacks available along with cow herd tours in the afternoon. On sale day, snacks and lunch will be provided, catered by Hard Eight BBQ. Lunch will be served at 11 a.m., and the sale starts promptly at 12 noon.

Thank you for taking the time and having an interest in our program. We look forward to seeing y'all. If you have any questions or if we can be of any help, please feel free to call us any time.

Jim & Rosemary Strode & Family  
James, Madison, Stella & Silvie Strode

*think Line One – think Flying S Herefords!*

HH Advance 5107C was the high selling bull in Holden's 2016 sale, commanding \$160,000. He is a maternal brother to the HH Advance 3297A herd bull. 5107C is built right from the ground up and is very conservatively marked. He sires calves that are big topped, square made, sound structured, big ribbed and phenotypically some of the best cattle we have produced. This powerful 215Z son is a Trait Leader for CED, WW, YW, M&G, CEM, Teat, CW, REA, Marb and all \$Indexes. He has a flawless phenotype and is out of the HH Miss Advance 9228W donor cow, who is a herd bull producing machine.

7193E was the cover bull and leadoff bull in Holden's 2018 sale. He is an exciting son of the \$130,000 5110C Cooper bull. The more you study this bull, the more you like him. He is soft made, deep flanked, big bellied, extra thick, well marked and very correct in his structure. Three different maternal brothers were used in Holden's herd last year, and a son out of a maternal sister was retained this year. We think a lot of this cow family and all the functional traits it brings to the table. 7193E also brings in the great 055X cow from Coopers. He is a front pasture, all-around herd sire that is destined to be a breed improver.

8120F topped Holden's 2019 sale at \$55,000 for 1/2 interest. Look at the bone, substance and overall mass in this fantastic young herd sire! 8120F is well marked, big testicled, super correct and out of a great cow. Dam is a top donor with a freckled face and red on her teats. Maternal granddam is a donor for Cooper Herefords and produced their third high selling bull in the 2018 sale. Note the exceptional carcass EPDs and CHBS on 8120F. He is a true beef bull that will add value to all segments of the industry! His service sells.

## Understanding Hereford EPDs

The American Hereford Association (AHA) currently produces expected progeny differences (EPDs) for 17 traits and calculates three profit (\$) indexes.

The eight EPDs and the \$Index included in our 2020 sale catalog are:

### Calving Ease Direct (CED)

CED EPD is based on calving ease scores and birth weights and is measured on a percentage. CED EPD indicates the influence of the sire on calving ease in females calving at two years of age. For example, if sire A has a CED EPD of 6 and sire B has a CED EPD of -2, then you would expect on average if comparably mated, sire A's calves would be born with an 8% more likely chance of being unassisted when compared to sire B's calves.

### Birth Weight (BW)

BW EPD is an indicator trait for calving ease and is measured in pounds. For example, if sire A has a BW EPD of +3.6 and sire B has a BW EPD of +0.6, then you would expect on average if comparably mated, sire A's calves would come 3 lbs. heavier at birth when compared to sire B's calves. Larger BW EPDs usually, but not always, indicate more calving difficulty.

### Weaning Weight (WW)

WW EPD is an estimate of pre-weaning growth that is measured in pounds. For example, if sire A has a WW EPD of +60 and sire B has a WW EPD of +40, then you would expect on average if comparably mated, sire A's calves would weigh 20 lbs. heavier at weaning when compared to sire B's calves.

### Yearling Weight (YW)

YW EPD is an estimate of post-weaning growth that is measured in pounds. For example, if sire A has a YW EPD of +100 and sire B has a YW EPD of +70, then you would expect on average if comparably mated, sire A's calves would weigh 30 lbs. heavier at a year of age when compared to sire B's calves.

### Scrotal Circumference (SC)

Measured in centimeters and adjusted to 365 days of age, SC EPD is the best estimate of fertility. It is related to the bull's own semen quantity and quality and is also associated with age at puberty of sons and daughters. Larger SC EPDs suggest younger age at puberty. Yearling sons of a sire with a .7 SC EPD should have yearling scrotal circumference measurements that average 0.7 centimeters (cm) larger than progeny by a bull with an EPD of 0.0 cm. In the Hereford genetic analysis, a multiple-trait model was used for scrotal circumference. Weaning weight was used as a predictor variable to increase the prediction accuracy of SC EPDs. Therefore, an animal with a weaning weight EPD should also have a SC EPD.

### Maternal Milk (Milk)

The milking ability of a sire's daughters is expressed in pounds of calf weaned. It predicts the difference in average weaning weights of sires' daughters' progeny due to milking ability. Daughters of the sire with a +14 Milk EPD should produce progeny with 205-day weights averaging 24 lbs. more (as a result of greater milk production) than daughters of a bull with a Milk EPD of -10 lbs. (14 minus -10.0 = 24 lbs.). This difference in weaning weight is due to total milk production during the entire lactation.

### Ribeye Area (REA)

REA EPDs reflect differences in an adjusted 365-day ribeye area measurement based on carcass measurements of harvested cattle. Sires with relatively higher REA EPDs are expected to produce better muscled and higher percentage yielding slaughter progeny than will sires with lower REA EPDs. Ultrasound measurements are also incorporated into this trait and have been shown to be highly correlated with the performance of slaughter progeny. All data is expressed on a carcass scale.

### Marbling (Marb)

Marb EPDs reflect differences in an adjusted 365-day marbling score (intramuscular fat, or IMF) based on carcass measurements of harvested cattle. Breeding cattle with higher MARB EPDs should produce slaughter progeny with a higher degree of IMF and therefore higher quality grades. Ultrasound measurements are also incorporated into this trait and have been shown to be highly correlated with the performance of slaughter progeny. All data is expressed on a carcass scale.

### Certified Hereford Beef Index (CHBS)

This is a terminal sire index that is built on a production system where Hereford bulls sire calves for the CHB market. There is some pressure put on CED and then positive weight on both WW and YW. Remember that all offspring in this index are harvested, so they need to be born alive and then grow fast at all stages of life. Of course, we have much more emphasis on fat in this index, as we want the cattle to stay lean. There is also a significant weight on both REA and IMF, with more emphasis again on IMF. This index would be used by producers who have a target of producing bulls for a terminal breeding program. It could be used heavily in the Midwest, where bulls are used in rotational breeding programs to produce cattle in a retained ownership program or are simply sold to backgrounders. This is the only index that has no emphasis on fertility. Remember that nothing is retained in the herd.

For more information, log on to [www.hereford.org](http://www.hereford.org)

Each animal tested is recognized with the AHA GE-EPD logo.

AHA Trait	Accuracy Improvement	Effective Progeny Number Increase*
Calving Ease	0.09	17
Birth Weight	0.12	8
Weaning Weight	0.14	12
Yearling Weight	0.16	9
Scrotal Circumference	0.17	6
Mature Cow Weight	0.12	4
Udder Suspension	0.17	7
Teat Size	0.17	7
Carcass Weight	0.11	3
Fat	0.08	2
Rib-Eye Area	0.07	2
Marbling	0.10	3

\* Effective Progeny Number Increase (EPNI)- EPNI is the difference gained for genotyped animals versus non-genotyped animals.

# The Fall Long Yearling Bulls

This set of fall 2018-born bulls we feel is truly the best set of bulls we have raised to date.

As a group, they have average weights of 78 lbs. for birth weight, 752 lbs. for adjusted 205-day weight and 1244 lbs. for adjusted 365-day weight. When it comes to carcass, this set of bulls really scanned great as a group.

Combined, they averaged 13.06 sq. in. for REA and 3.53% for IMF.

## THE BALD-FACED TRUTH ABOUT HEREFORD GENETICS

Take advantage of hybrid vigor with Hereford genetics.

### HEREFORD ADVANTAGE

Use the Hereford Advantage program to increase added market power and brand recognition with feeder cattle sired by a Hereford bull battery ranking in the top 50% for the CHBS index.

### MATERNAL ADVANTAGE

The Maternal Advantage program generates females with added longevity, more docility, increased fertility and more profit per year. Can be utilized by producers using Hereford bulls on British-based cows or Brahman-based cows in their breeding program.

### PREMIUM RED BALDY

Premium Red Baldy is designed to take advantage of the best traits of both Hereford and Red Angus. Females must be sired by bulls in the top 50% of the breed for Baldy Maternal Index (BMI\$) or Herdbuilder Index (HB).

HerefordTruth.com | (816) 842-3757

# The Spring Yearling Bulls

As a group, the spring yearling bulls had an average birth weight of 78 lbs., an average 205-day weight of 752 lbs. and an average 365-day weight of 1212 lbs. We have really focused on the carcass in our cattle, and this set of bulls scanned great as a group. The average for this set of bulls is 12.32 sq. in. on REA and 3.53% on IMF.

Top notch heifer bull prospect with lots of growth. 9038G is the youngest bull in the sale but has been one to keep an eye on. He is double bred HH Miss Advance 5139R, and the rest of his pedigree is stacked with other top producing females. 9038G has great depth, pigment, thickness and lots of carcass. He has curve bending numbers and lots of eye appeal. His dam is a beautiful uddered 3297A daughter that we flushed this past fall and will continue to stay in our donor pen for years to come.
