

# Welcome to Flying S Herefords!

We would like to invite you to join us for our **11th Annual Production Sale** here at the ranch, located in Paluxy, Texas, southwest of Fort Worth. Our mission at Flying S Herefords is to produce elite Line One Horned Herefords that will excel in any environment for any type of operation.

Our focus is on every aspect of the Hereford breed. We believe in a long-lasting performance Line One breeding program to increase the predictability of our cattle for our customers, whether Commercial or Seedstock. To succeed in Line One breeding, you must continue to introduce cattle with superior genetics. Flying S Herefords focuses heavily on the maternal abilities in our breeding program. We have a strict culling program that enables us to produce and retain only the genetically superior animals. Cows are culled based on fertility, performance, soundness, disposition, and udder quality.

We are active members in the Texas Hereford Association along with the American Hereford Association. We are involved with the TPR program of the American Hereford Association and are active members in the Whole Herd Reporting Program.

It is a great pleasure to be able to offer such an exceptional set of bulls and females. This group of bulls represents the best of our fall 2023 and spring 2024 calf crops. They are all sired by top, trait leading, high quality Line One bulls. They are a balanced trait set of bulls that combine phenotype, uniformity, pigment, maternal strength, thickness, performance, fleshing ability, carcass, and eye appeal. All bulls and heifers sell with performance and ultrasound data and have been DNA parentage verified, GE-EPD tested and have been tested IE Free, HY Free and Dilutor Free. All bulls have been Trich and semen tested. Their GE-EPDs will be available before sale day.

All sale cattle and our cow herd will be on display March 17th and 18th up to sale time. On Monday, the 17th, we will have drinks, snacks and dinner in the early evening along with cow herd tours in the afternoon. On sale day, coffee, snacks and lunch will be provided, catered by My Meat Is Sweet. Lunch will be served at 11 a.m., and the sale starts promptly at 12 noon.

Thank you for taking the time and having an interest in our program. We look forward to seeing y'all sale day. If you have any questions or if we can be of any help, please feel free to call us any time. MAGA

### GPS address: 7955 CR 194, Bluff Dale, TX 76433

Flying S Herefords is located 1 hour southwest of Fort Worth, between Glen Rose and Stephenville.

Go southwest of Granbury on Hwy. 51, then 5.1 miles west of the intersection of Hwys. 205 and 51 on County Road 194, or 3.8 miles east of FM 2481 on CR 194. Watch for our signs!

### **Absentee Bidding**

### **HOW TO PARTICIPATE**

### go to WWW.LIVE-AG.COM

Click on the purebred tab, located at the top right of the screen. Select the auction of choice.

### Log In / Create an Account

Select 'log in or create an account to bid'. Log in with your email & password or click 'create an account'. Fill out the required fields to bid online. Agree to the terms of service and finish with the 'register' button.

An account is NOT necessary to watch an auction.

### Register to Bid

Once logged in, and a sale of choice has been selected, click 'register to bid'. Agree to terms and conditions and click the 'Register' button. Pending request will be approved, in a timely manner.

# THE POWER OF

### **GENOMICALLY ENHANCED EPDS**

The American Hereford Association (AHA) has embraced the use of genomics into their genetic evaluation by launching a first of its kind single step analysis that utilizes the marker effects of specific traits. Likewise, AHA is directly estimating accuracy values rather than approximating. The direct estimation of accuracy results in a more conservative value but a more accurate value than previous methodologies. The AHA is producing the most reliable genetic evaluation that is supported by Whole Herd TPR<sup>TM</sup> and genomics, which will give prospective buyers added confidence in purchasing young and unproven animals.

Buying animals that have a genomic profile incorporated into their Expected Progeny Difference (EPD) offers many advantages that allow for quicker breed and herd improvement. To the right is a table showing the average increase in accuracy when buying a young animal with a Genomic Enhanced EPD (GE-EPD) versus an animal without a GE-EPD. Similarly, an effective progeny number increase is listed by trait that shows how many progeny equate to a genomic enhancement of a young animal (e.g. yearling). That's right, buying a young animal that has been genotyped is like having 2-17 progeny, depending on the trait. The proof gained on young, non-parent animals, through a genomic enhancement is valuable and greatly mitigates the risk and allows for more directed selection.

AHA TRAIT	ACCURACY IMPROVEMENT	EFFECTIVE PROGENY NUMBER INCREASE*		
CALVING EASE	0.09	17		
BIRTH WEIGHT	0.12	8		
WEANING WEIGHT	0.14	12		
YEARLING WEIGHT	0.16	9		
SCROTAL CIRCUMFERENCE	0.17	6		
MATURE COW WEIGHT	0.12	4		
UDDER SUSPENSION	0.17	7		
TEAT SIZE	0.17	7		
CARCASS WEIGHT	0.11	3		
FAT	0.08	2		
RIB-EYE AREA	0.07	2		
MARBLING	0.10	3		

\* Effective Progeny Number Increase (EPNI)- EPNI is the difference gain

Each animal tested is recognized with the AHA GE-EPD logo.

3006A was the high-selling bull in Holden's 2014 sale at \$80,000 for half interest and half possession and is an outstanding bull in every way. Long bodied, thick made, well marked and fancy, and he backs it all up with outstanding performance and ultrasound data and great EPDs. He is backed by one of Holden's best cow families. His progeny have tremendous pigment, growth, length, depth, shape, style and eye appeal. AHA Trait Leader for SC, Milk, M+G and Fat.

HH Advance 5107C was the high selling bull in Holden's 2016 sale for \$160,000 and is a maternal brother to the HH Advance 3297A herd bull. 5107C is built right from the ground up and is very conservatively marked. His progeny are big topped, square made, sound structured, big ribbed and phenotypically some of the best cattle we have produced. He is a powerful 215Z son that has an outstanding EPD profile combined with a flawless phenotype and is backed by the HH Miss Advance 9228W donor cow, who is a herd bull producing machine. Five star AHA Trait Leader.

7193E was the cover bull and lead off bull in Holden's 2018 sale. He is an exciting son of the \$130,000 5110C Cooper bull. He is soft made, deep flanked, big belled, extra thick, well marked and very correct in his structure. Three maternal brothers were used in Holden's herd, and a son out of a maternal sister was retained. We think a lot of this cow family and all the functional traits it brings to the table. 7193E also brings in the great 055X cow from Cooper's. He is an all-around herd sire that is destined to be a breed improver. Five star AHA Trait Leader.

Expected progeny differences (EPDs) are statistical predictions, or estimates, of expected performance of future progeny – they are not guarantees of performance. The American Hereford Association (AHA) currently produces EPDs for 17 traits and calculates three profit (\$) indexes. AHA's genetic evaluation makes use of a Marker Effects Model that allows the calculation of EPDs by incorporating the pedigree, phenotypic and genomic profile of an animal. Animals that have a genomic profile will be denoted with a GE-EPD logo. EPDs are updated weekly by the AHA.

### The EPDs and \$Indexes included in our 2025 sale catalog are as follows:

#### Calving Ease Direct (CED)

CED EPD is based on calving ease scores and birth weights and is measured on a percentage. CED EPD indicates the influence of the sire on calving ease in females calving at two years of age. For example, if sire A has a CED EPD of 6 and sire B has a CED EPD of -2, then you would expect on average if comparably mated, sire A's calves would be born with an 8% more likely chance of being unassisted when compared to sire B's calves.

#### Birth Weight (BW)

BW EPD is an indicator trait for calving ease and is measured in pounds. For example, if sire A has a BW EPD of +3.6 and sire B has a BW EPD of +0.6, then you would expect on average if comparably mated, sire A's calves would come 3 lbs. heavier at birth when compared to sire B's calves. Larger BW EPDs usually, but not always, indicate more calving difficulty.

#### Weaning Weight (WW)

WW EPD is an estimate of pre-weaning growth that is measured in pounds. For example, if sire A has a WW EPD of +60 and sire B has a WW EPD of +40, then you would expect on average if comparably mated, sire A's calves would weigh 20 lbs. heavier at weaning when compared to sire B's calves.

#### Yearling Weight (YW)

YW EPD is an estimate of post-weaning growth that is measured in pounds. For example, if sire A has a YW EPD of +100 and sire B has a YW EPD of +70, then you would expect on average if comparably mated, sire A's calves would weigh 30 lbs. heavier at a year of age when compared to sire B's calves.

#### Scrotal Circumference (SC)

Measured in centimeters and adjusted to 365 days of age, SC EPD is the best estimate of fertility. It is related to the bull's own semen quantity and quality and is also associated with age at puberty of sons and daughters. Larger SC EPDs suggest younger age at puberty. Yearling sons of a sire wth a 0.7 SC EPD should have yearling scrotal circumference measurements that average 0.7 centimeters (cm) larger than progeny by a bull with an EPD of 0.0 cm. In the Hereford genetic analysis, a multiple-trait model was used for scrotal circumference. Weaning weight was used as a predictor variable to increase the prediction accuracy of SC EPDs. Therefore, an animal with a weaning weight EPD should also have a SC EPD.

#### Maternal Milk (Milk)

The milking ability of a sire's daughters is expressed in pounds of calf weaned. It predicts the difference in average weaning weights of sires' daughters' progeny due to milking ability. Daughters of the sire with a +14 Milk EPD should produce progeny with 205-day weights averaging 24 lbs. more (as a result of greater milk production) than daughters of a bull with a Milk EPD of -10 lbs. (14 minus -10 = 24 lbs.). This difference in weaning weight is due to total milk production during the entire lactation.

#### Carcass Weight (CW)

CW EPD is a beneficial trait when considering the impact that pounds have relative to end product value. At the same age constant endpoint, sires with higher values for carcass weight will add more pounds of hot carcass weight compared to sires with lower values for carcass weight. For example, if sire A has a CW EPD of 84 and sire B has a CW EPD of 64, then you would expect the progeny of sire A, if harvested at the same age constant endpoint, to have a 20-lb. advantage in terms of hot carcass weight.

#### Breed average EPDs for 2023 and 2024 calves:

CED	BW	WW	YW	SC	MILK	CW	REA	MARB	BMI\$	BII\$	CHB\$
+3.4	+2.6	+56	+90	+1.0	+27	+71	+.46	+.14	+369	+445	+121

#### Ribeye Area (REA)

REA EPDs reflect differences in an adjusted 365-day ribeye area measurement based on carcass measurements of harvested cattle. Sires with relatively higher REA EPDs are expected to produce better muscled and higher percentage yielding slaughter progeny than will sires with lower REA EPDs. Ultrasound measurements are also incorporated into this trait and have been shown to be highly correlated with the performance of slaughter progeny. All data is expressed on a carcass scale.

#### Marbling (MRB)

Marbling EPDs reflect differences in an adjusted 365-day marbling score (intramuscular fat, or IMF) based on carcass measurements of harvested cattle. Breeding cattle with higher Marbling EPDs should produce slaughter progeny with a higher degree of IMF and therefore higher quality grades. Ultrasound measurements are also incorporated into this trait and have been shown to be highly correlated with the performance of slaughter progeny. All data is expressed on a carcass scale.

#### Baldy Maternal Index (BMI\$)

The BMI\$ is a maternally focused index that is based on a production system that uses Hereford x Angus cross cows. Progeny of these cows are directed toward Certified Hereford Beef. This index has significant weight on Sustained Cow Fertility, which predicts fertility and longevity of females. There is a slightly positive weight on Weaning Weight, Mature Cow Weight and Milk which accounts for enough growth but ensures females do not increase inputs. There is some negative emphasis on Dry Matter Intake, but a positive weighting on Carcass Weight which is anticipated to provide profitability from finishing of non-replacement females and castrated males. Marbling and ribeye area are also positively weighted to keep the harvested progeny successful for CHB. This index is geared to identify Hereford bulls that will be profitable when used in a rotational cross with mature commercial Angus cows.

#### Brahman Influence Index (BII\$)

The BII\$ is a maternally focused index that is based on a production system that uses Brahman x Hereford cross cows. Progeny of these cows are directed toward a commodity beef market, since Certified Hereford Beef® does not accept Brahman-influenced cattle. This index has significant weight on Sustained Cow Fertility, which predicts fertility and longevity of females. There is a slightly positive weight on Weaning Weight, Mature Cow Weight and Milk which accounts for enough growth but ensures females do not increase inputs. There is some negative emphasis on Dry Matter Intake but a positive weighting on Carcass Weight, which is anticipated to provide profitability in finishing non-replacement females and castrated males. Marbling and ribeye area are also positively weighted to keep harvested progeny successful for a variety of commodity based programs. This index targets producers who use Hereford bulls on Brahman-influenced cows.

#### Certified Hereford Beef Index (CHB\$)

This is a **terminal sire index** that is built on a production system where Hereford bulls sire calves for the CHB market. There is some pressure put on CED and then positive weight on both WW and YW. Remember that all offspring in this index are harvested, so they need to be born alive and then grow fast at all stages of life. Of course, we have much more emphasis on fat in this index, as we want the cattle to stay lean. There is also a significant weight on both REA and IMF, with more emphasis again on IMF. This index would be used by producers who have a target of producing bulls for a terminal breeding program. It could be used heavily in the Midwest, where bulls are used in rotational breeding programs to produce cattle in a retained ownership program or are simply sold to backgrounders. *This is the only index that has no emphasis on fertility. Remember that nothing is retained in the herd.* 

For more information, log on to www.hereford.org

The EPDs printed in the catalog are from the Feb. 17, 2025 American Hereford Association report.

Updated GE-EPDs will be available sale day and online at flyingsherefords.com

This set of fall 2023-born bulls we feel is one of the best sets of bulls we have raised to date. As a group, they had an actual birth weight average of 75 lbs., an average 205-day weight of 751 lbs., and an average 365-day weight of 1346 lbs. When it comes to carcass, this set really scanned great as a group. Combined, they averaged 10.47 sq. in. for ribeye area and 3.71% for marbling.

7111E has 100% pigment, is short marked and has a lot of volume. Her EPD profile is really balanced with good numbers across the board in calving ease, fertility, maternal and carcass. She is a proven donor that produces outstanding progeny, including the CL 1Domino 917G herd bull for Holden Herefords and Baumgarten Cattle Co.

510C has been a favorite of mine since she was born. She is a prolific, proven, powerhouse donor female. She has pigment, a big body, a deep side and a great udder and is super stylish. She has outstanding EPDs and is backed by one of the top cow families in the breed. Six sons have averaged over \$14,000, with the top selling bull at \$30,000.

FS Miss Advance 4006M

### Selling Buyer's Choice of two daughters of FS Advance 1060F

Once again, we are offering an opportunity to choose from the heart of our program. We are offering a choice between two young FS Advance 1060J daughters that we feel are some of the best we have ever produced. The phenotype, performance and carcass these two females have are one of a kind. We are reserving the right to one future flush on the female that is chosen at our expense and the buyer's convenience.

Maternal brother to lot 3091L -

1060J is the sire of the buyer's choice open heifers, 4006M and 4017M

# Tall Bred Cows

This set of fall bred females is one of the youngest and best sets of bred cows we have ever offered. These females were purposely kept open last year and held over to tighten up the fall-calving program. Four of the ten females are A.I. bred to HH Advance 0043H, and most of them were pasture exposed to him as well.

HH Advance 0043H Most of the fall-calving cows carry his service

# ADD VALUE

WITH FEEDER CATTLE & REPLACEMENT FEMALE PROGRAMS

#### HEREFORD ADVANTAGE

An industry-changing feeder cattle marketing program through IMI Global to verify and add value to Hereford-influenced feeder cattle with superior genetics, health and management.

LEARN MORE ABOUT THESE PROGRAMS

#### MATERNAL ADVANTAGE

A unique marketing program designed to add value to Hereford-sired commercial replacement females with added fertility, feed efficiency, profitability and docility.

#### PREMIUM RED BALDY

Take advantage of hybrid vigor by maximizing the best traits of Hereford and Red Angus genetics that provide commercial producers with premium replacement females.
